ISTRA

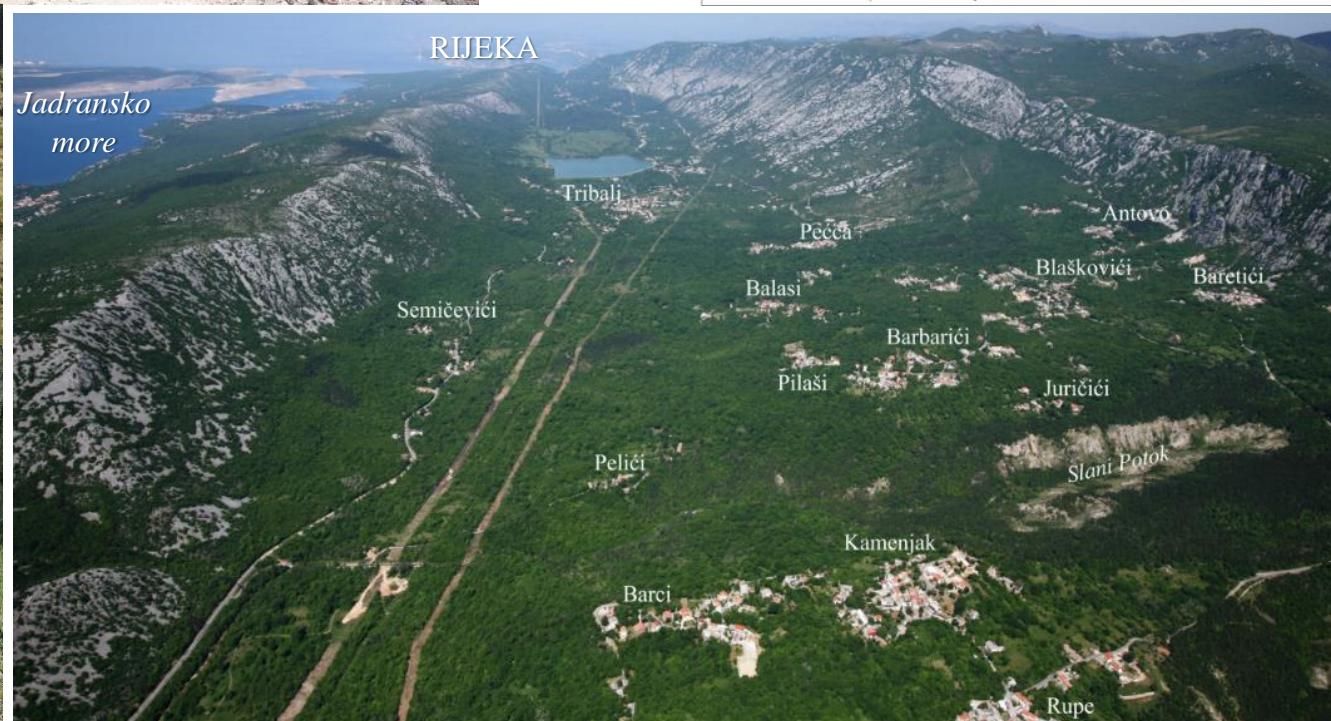

PRIMORJE

VINODOLSKA UDOLINA

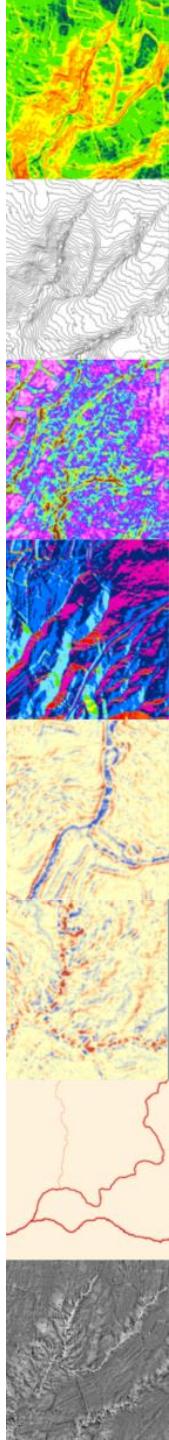

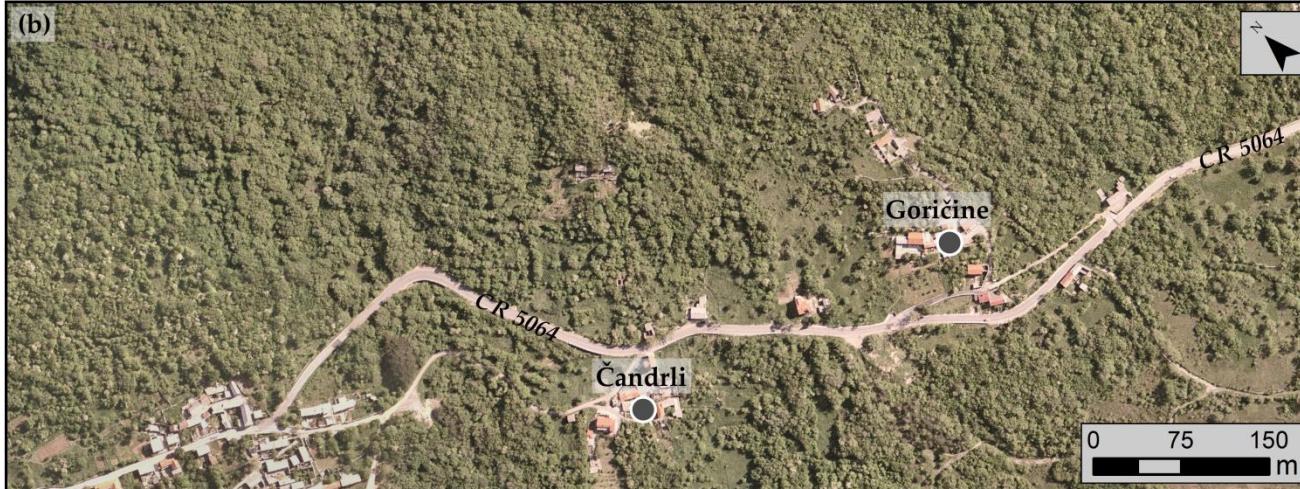

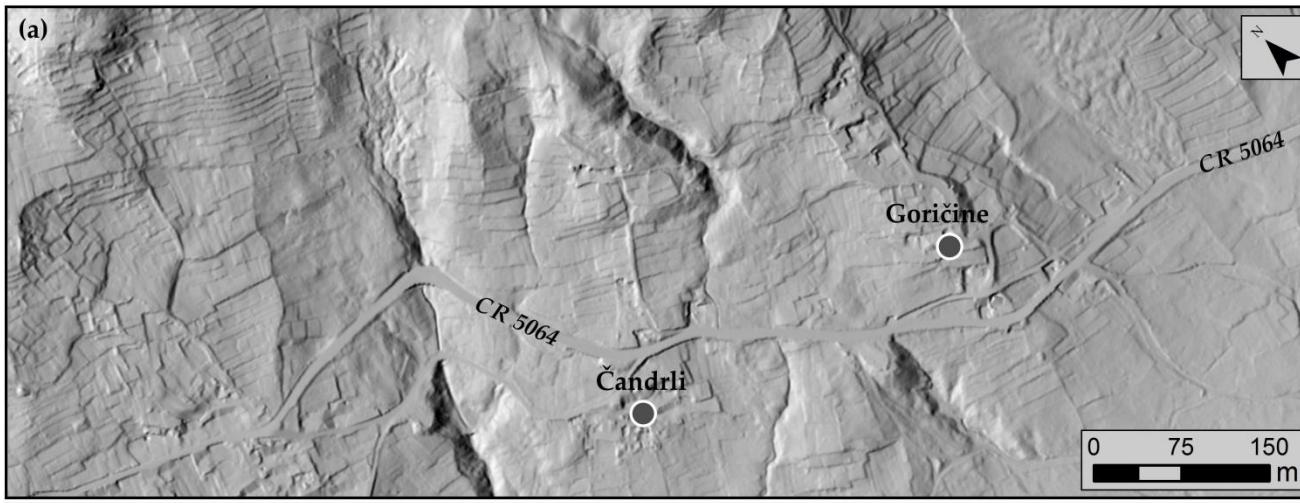

- lasersko skeniranje iz zraka u ožujku 2012. godine
- LiDAR DMR I x I m

VINODOLSKA UDOLINA

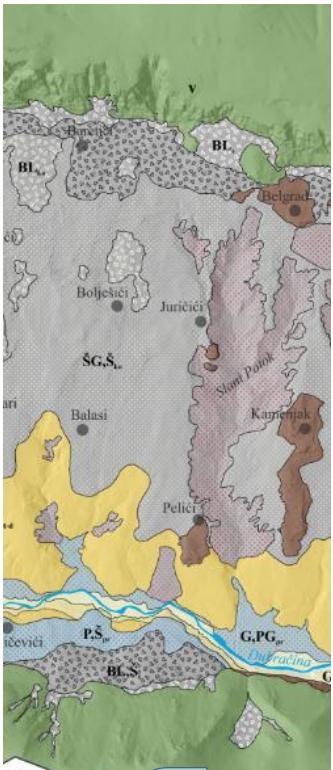

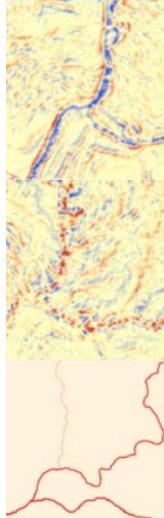

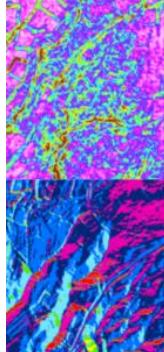

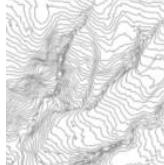

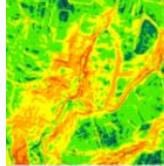

- topografski otisci geomorfoloških procesa i posljedica ljudskih djelatnosti

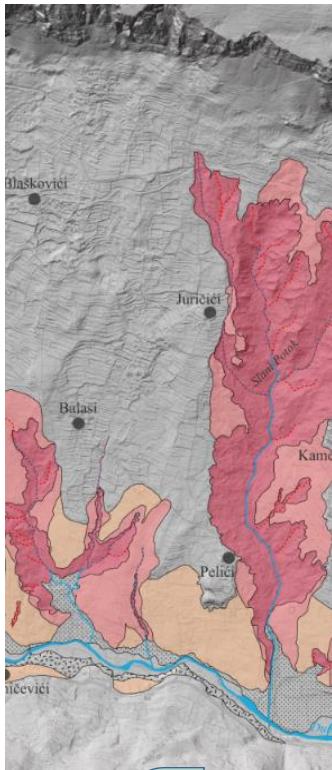

ZNANJE I TEHNOLOGIJA

Što nam je danas poznato?

INVENTAR KLIZIŠTA VINODOLSKE UDOLINE

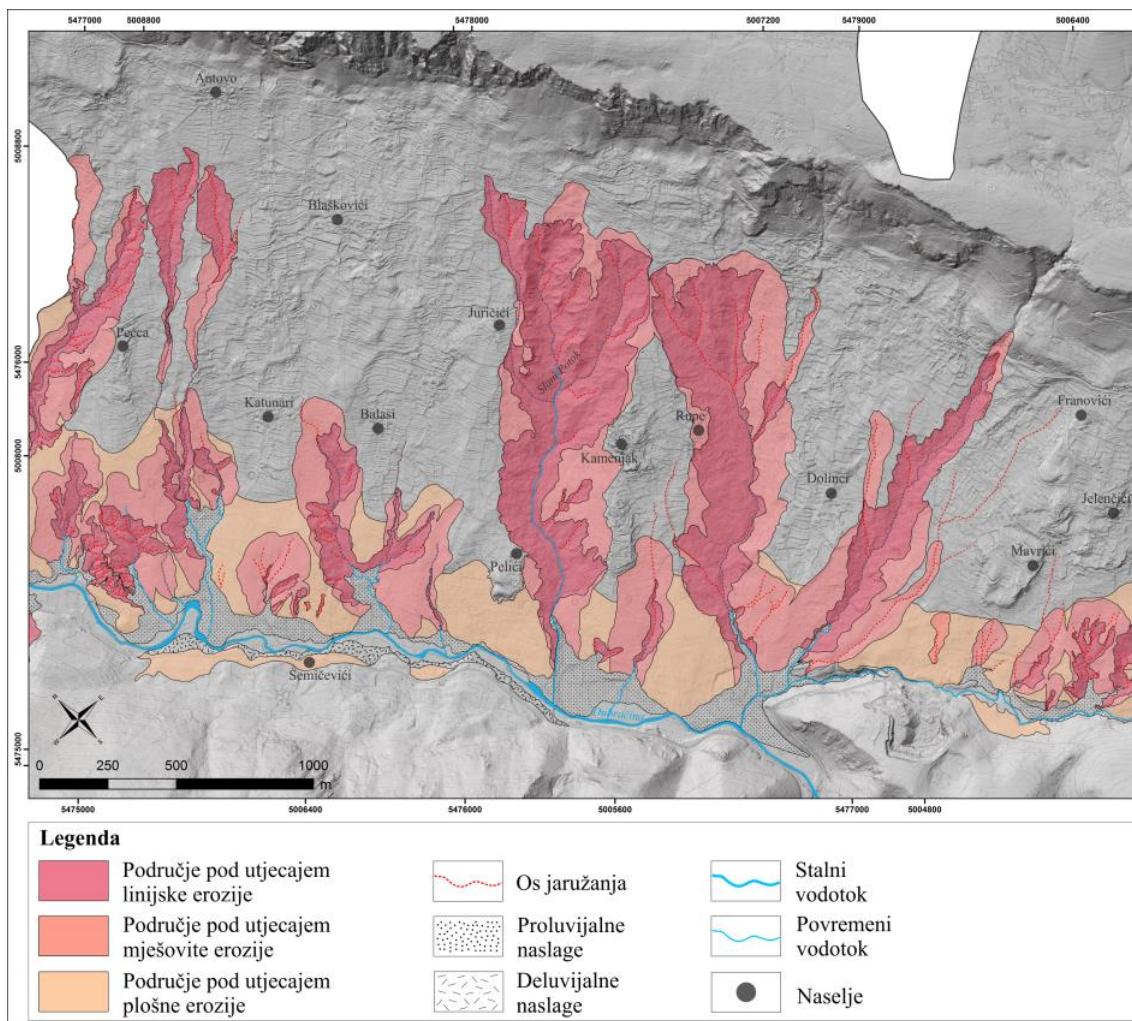

- detaljni povijesni geomorfološki inventar

10 tipova klizišta
(Hungri i dr., 2014)

- 633 poligona pojedinačnih klizišta
- 627 klizišta u tlu
- $P_{uk} = 1,41 \text{ km}^2$
- $P_{min} = 64,80 \text{ m}^2$
- $P_{max} = 49\ 461,62 \text{ m}^2$
- $Q_3 = 2\ 457,37 \text{ m}^3$
- $7,53 \text{ km}^2 (11,67 \%)$ Vinodolske udoline zahvaćeno klizištima

INVENTAR EROZIJE VINODOLSKЕ UDOLINE

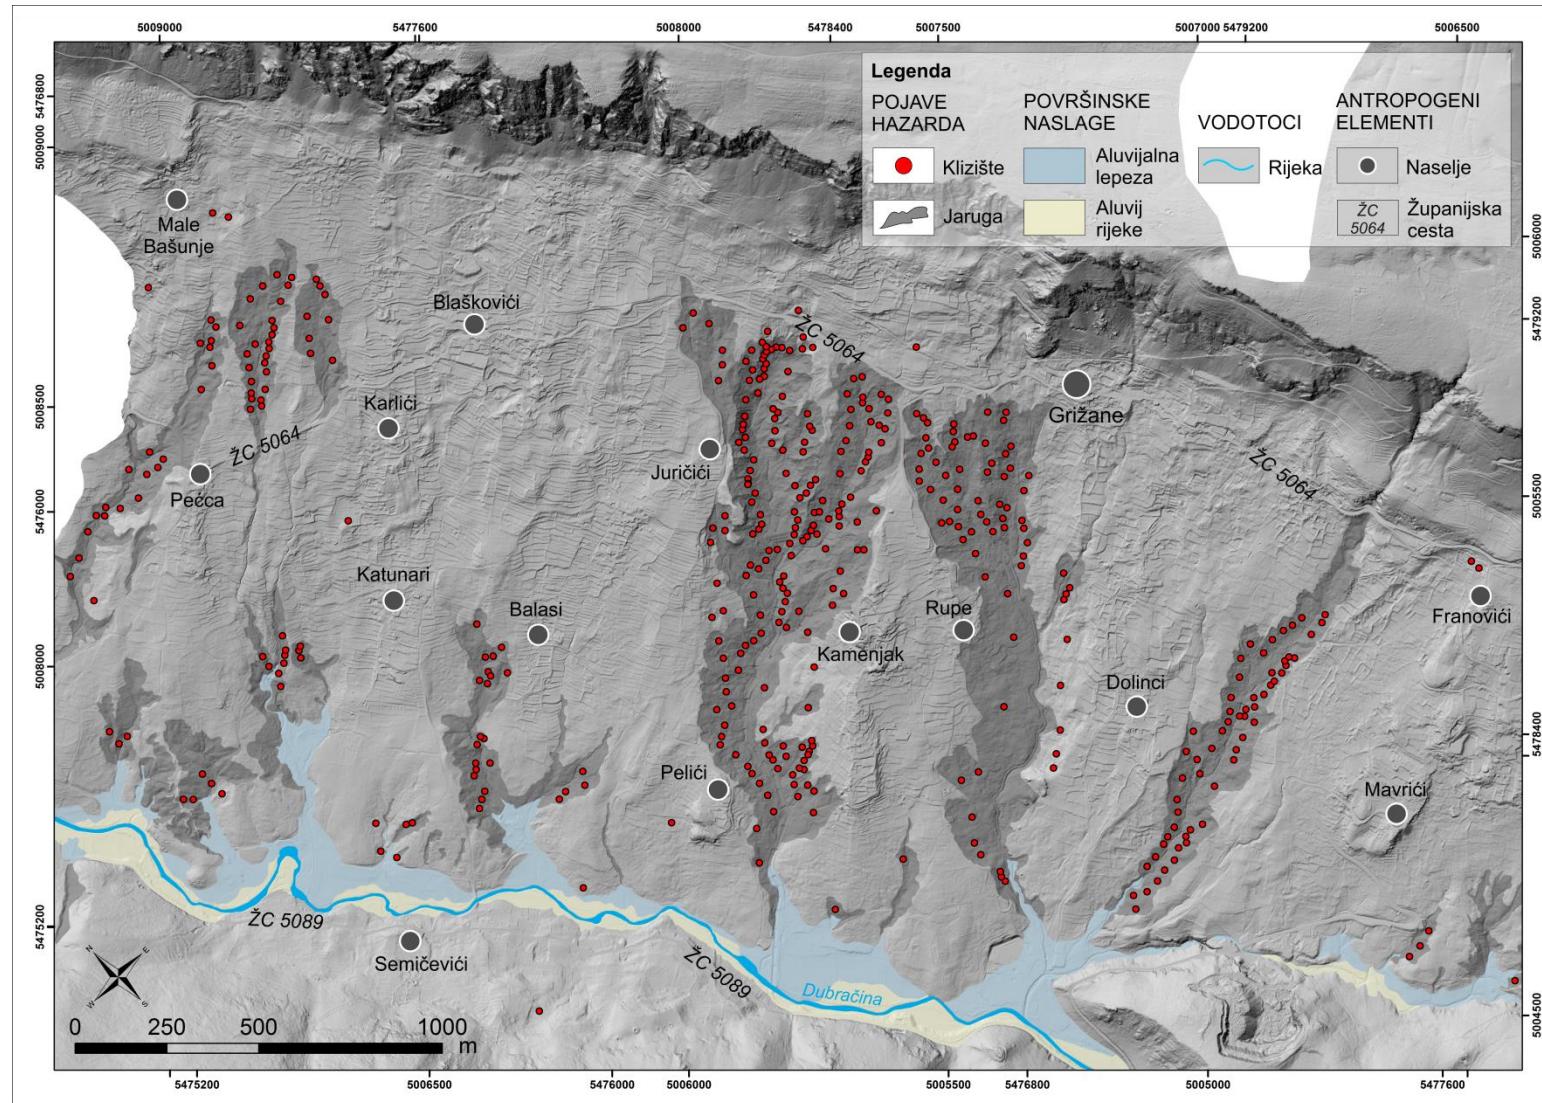

- detaljni povijesni geomorfološki inventar

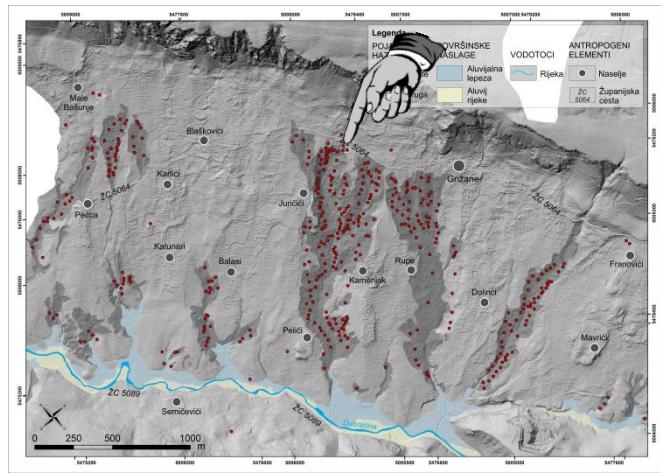

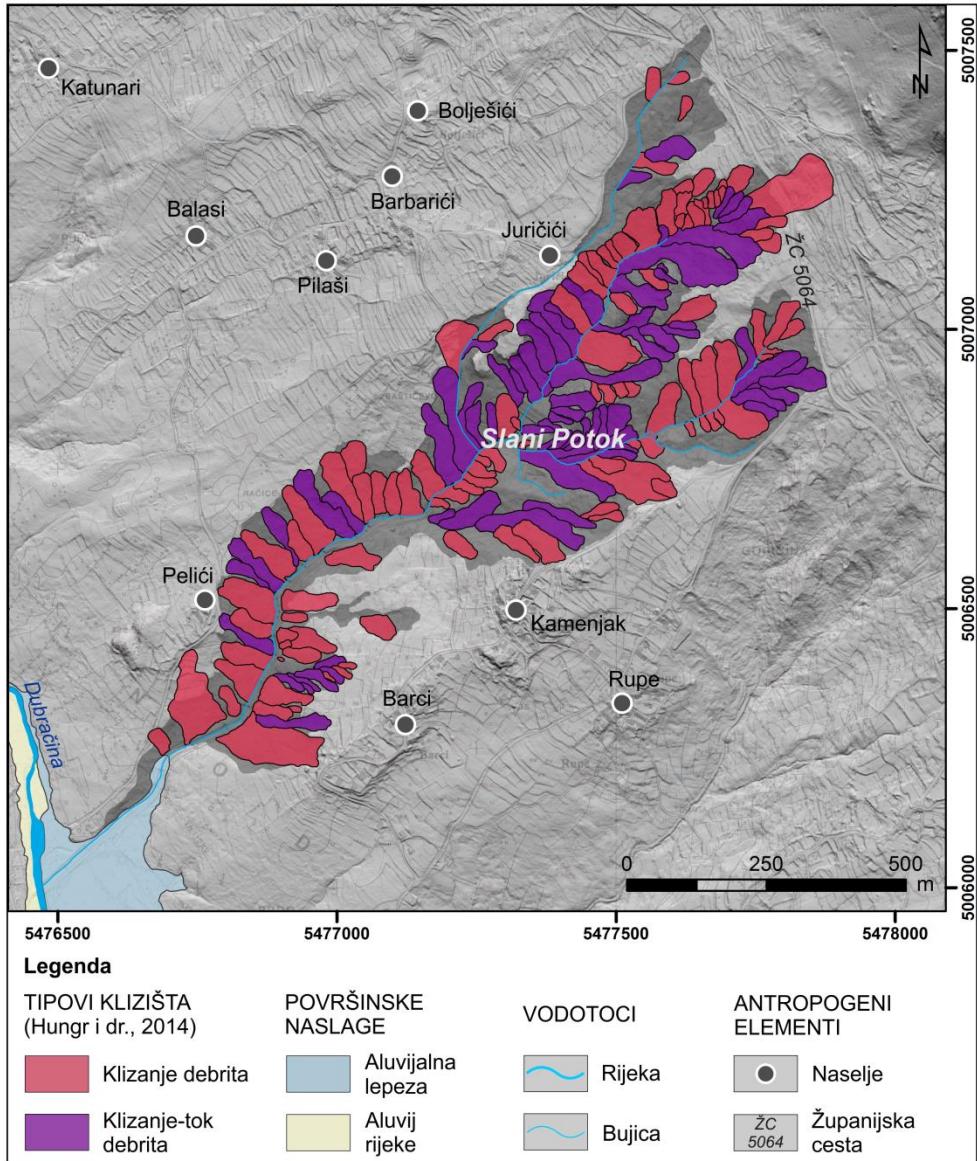

- 236 jaruga
- $1,89 \text{ km}^2$ linijska erozija
- $2,92 \text{ km}^2$ mješovita erozija
- $5,11 \text{ km}^2$ plošna erozija
- $7,66 \text{ km}^2$ Vinodolske udoline pod utjecajem procesa erozije
- 11,86 % površine Vinodolske udoline

OKOLIŠ AKTIVIRANJA KLIZIŠTA

- klizišta su pretežno otkrivena u jarugama

SLANI POTOK

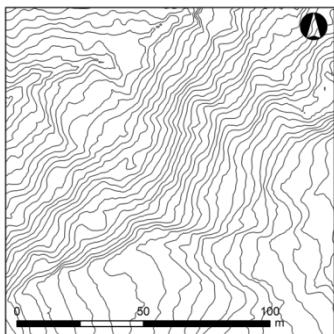

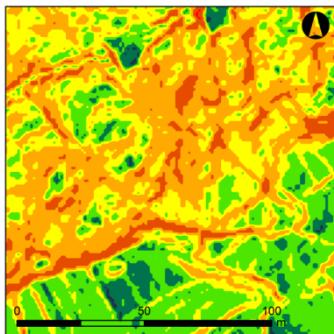

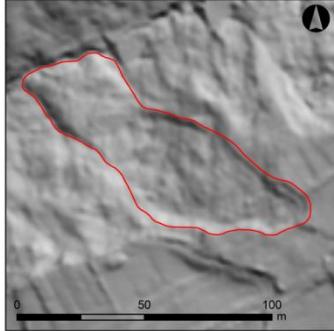

- najveća jaruga ($0,48 \text{ km}^2$) oblikovana u Vinodolskoj udolini
- samo u ovoj jaruzi ($0,48 \text{ km}^2$) otkriveno je 181 klizište vizualnom interpretacijom DMR-a
- klizišta su inicirana linijskom erozijom u nožici bokova jaruga
- istovremeno, klizišta svojom aktivnošću proširuju jarugu, čime se pospješuje daljnji razvoj procesa erozije

PROŠIRIVANJE KLIZIŠTIMA

- sva prikazana klizišta, vrlo često reaktivirana, pojavljuju se u bokovima jaruga
- topografija klizišta je pod utjecajem erozijskih procesa

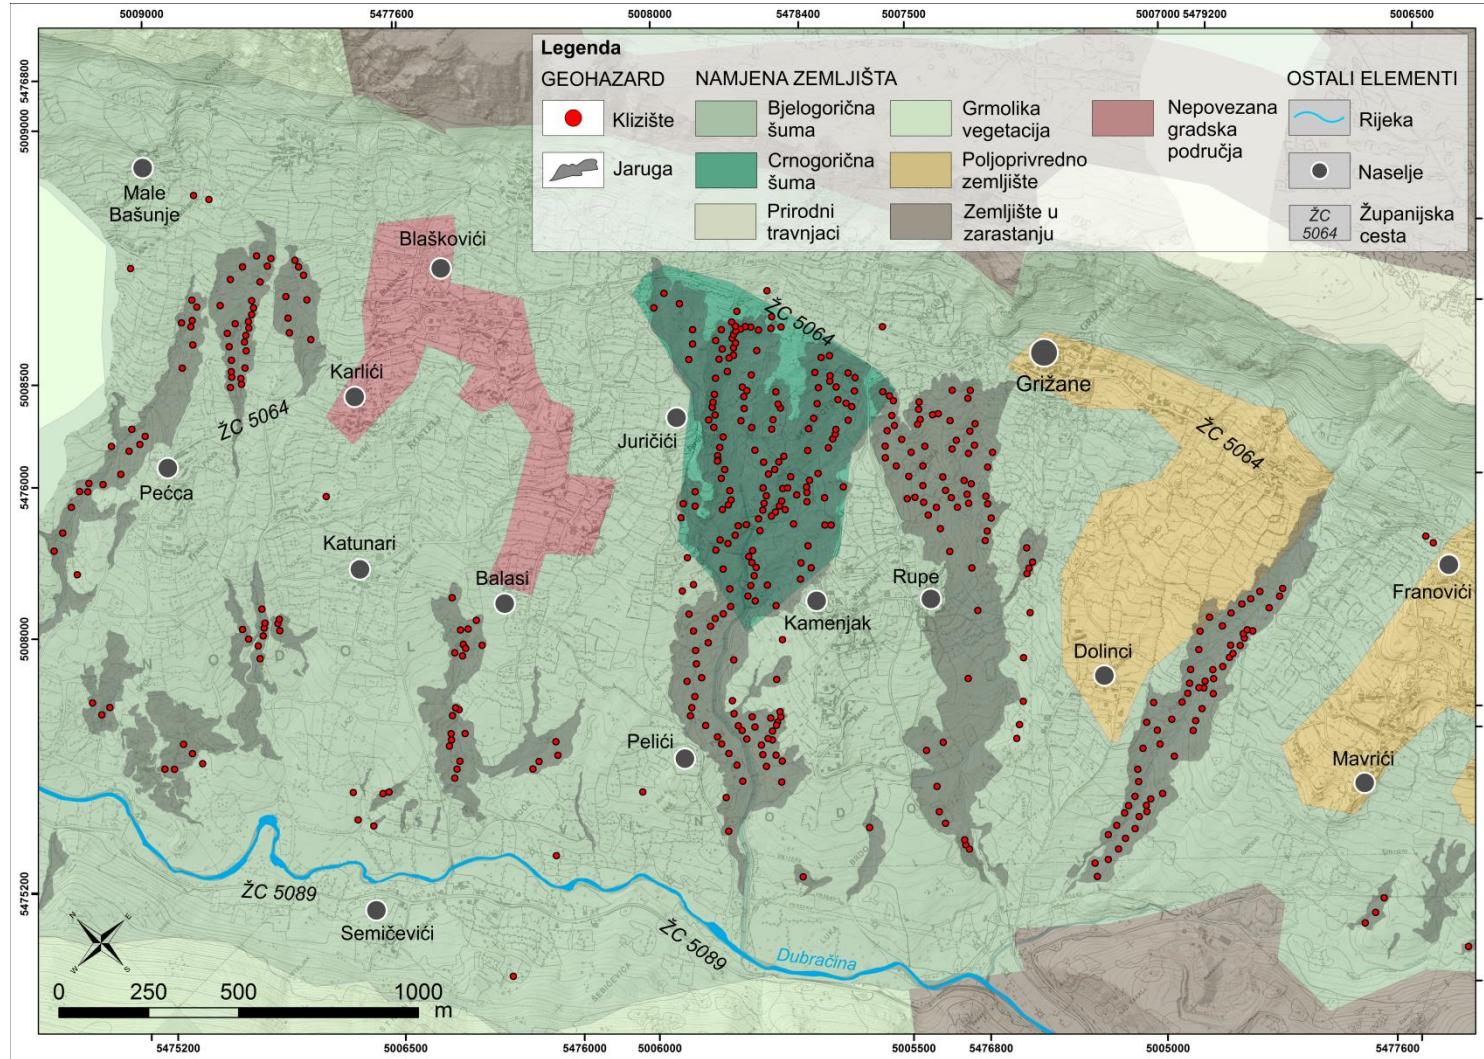

LiDAR DMR 1 x 1 m

POSTOJEĆE STANJE

GEOHAZARD I POKROV ZEMLJIŠTA

- jaruge i većina klizišta zahvaćaju područja prekrivena bjelogoričnom šumom
- jaruge i klizišta ne nalazi se u blizini, odnosno unutar granica naselja

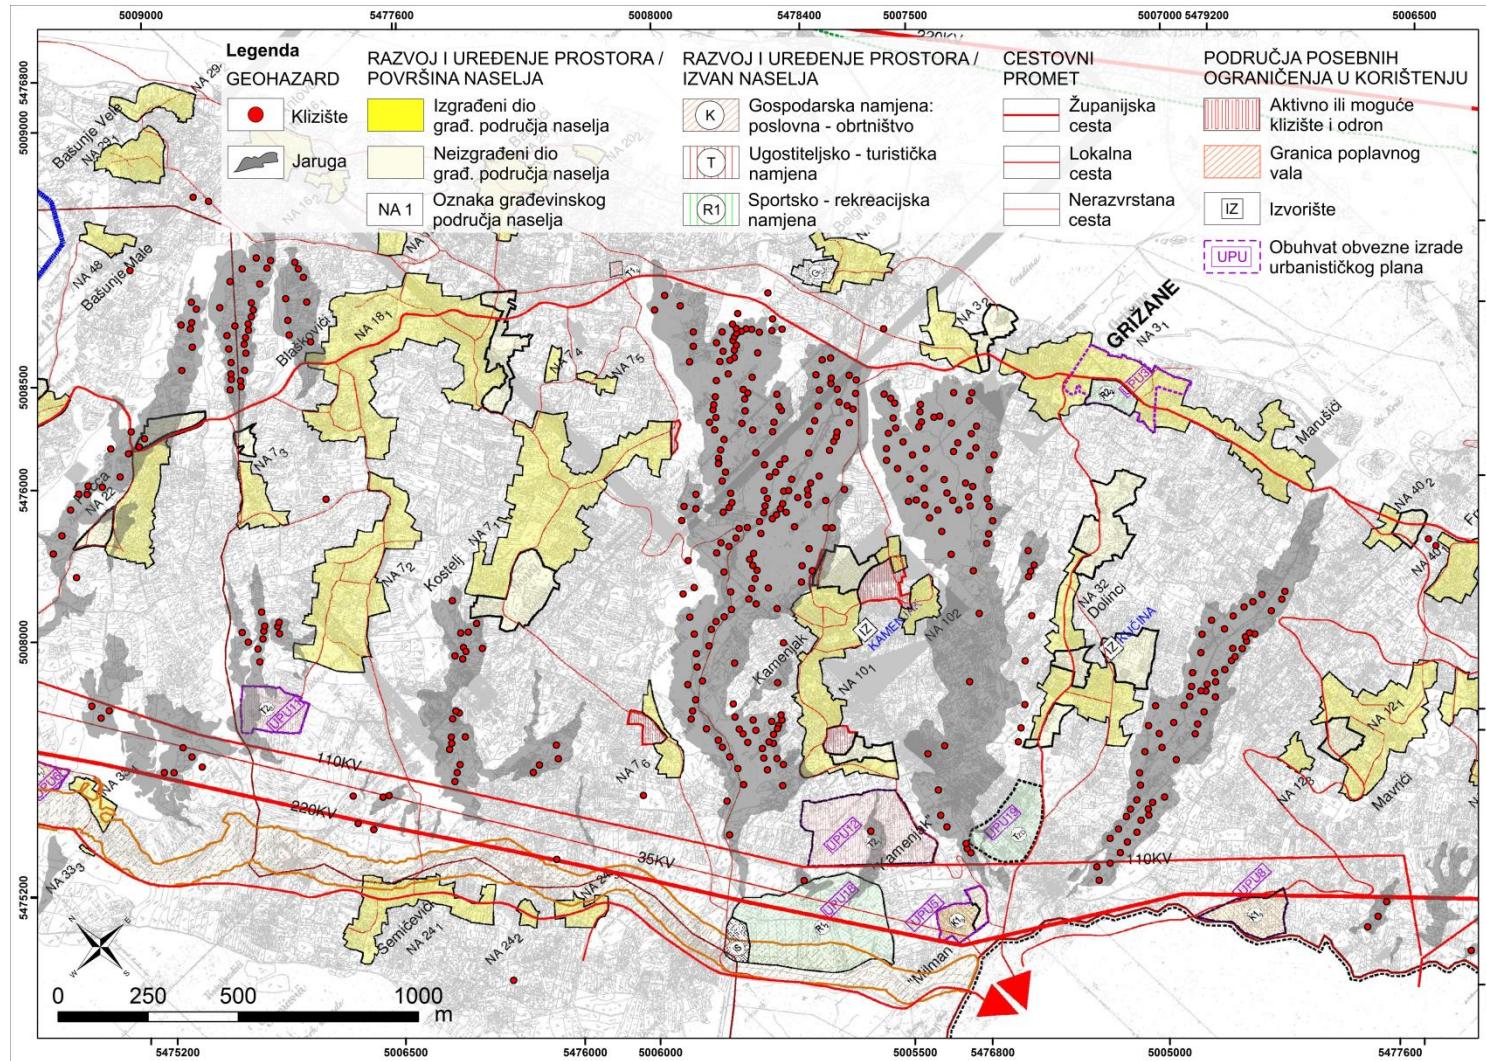

POSTOJEĆE STANJE

GEOHAZARD I PROSTORNI PLAN

- prostorna raspodjela zona aktivnih ili mogućih klizišta prema Prostornom planu uređenja naspram prostorne raspodjele klizišta otkrivenih na LiDAR DMR-u

SIVA ISTRA

- aktivni geohazardni procesi:
pojave klizišta i erozijskih ogolina

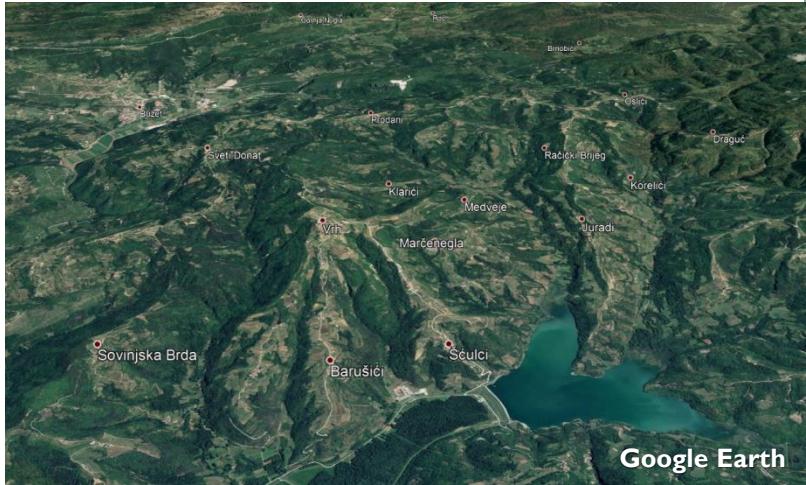

Prostorna raspodjela
Međuvisnost
